VOL. XIV.

FEBRUARY EDITION.

1919.

Wood's Crop Special is issued monthly. No subscription price, but is mailed free each month to customers whose orders indicate a special interest in farming, gardening or trucking.

If any of our customers do not receive Wood's Crop Special regularly, and desire to do so, advise us and we will put your name on our regular mailing list.

SEASONABLE NOTES.

Our Descriptive Annual Catalog has been unavoidably delayed this year, but is now being mailed out to our regular customers and should you not receive a copy during the next ten days, kindly advise us and we will take pleasure in sending you one by return mail.

From all indications the coming season has particularly bright prospects. Our boys are now returning from the war, and will soon be back to take up their duties on the farm with a renewed vigor and inspiration. Labor will be plentiful and cheaper throughout the South, and this in itself will enable the farmers to plant more acreage and harvest their crops to better advantage than during the war period.

In the last few weeks there has been a reduction of from 300 to 400 per cent. in ocean freight rates, which has been done with the main object of encouraging the shipment of essential food-stuffs and other necessities for the re-establishment of our war-stricken allied countries. This will undoubtedly cause a big demand for all cereals and other food supplies available for export, which makes it specially desirable to grow crops that are suitable for these purposes. Our Allies must be fed by us for the next few years, during their period of reconstruction and they will rely upon us to a large extent to supply them with foods and other necessary supplies.

The prices of seeds this year, particularly field seeds, are very moderate in comparison with other commodities and this together with the outlook for increased labor should give our farmers every encouragement to plant liberally and extend their operations.

Clover Seed.

Prices of Clover Seed continue high this year which is due to the fact of the short crop, and large demand which we have recently experienced. The high prices of Red Clover are causing a much larger demand for Alsike Clover and Alfalfa, both of which are relatively much lower in price than the Red Clover. Prices of clover will, in all probability continue high, on account of large exports which will be made during the coming season.

Alsike Clover.

Alsike Clover, due to the size of the seed, requires much less quantity to seed per acre, and makes the cost of seeding considerably lower than Red Clover. The quantity required to be sown by itself is 6 to 8 lbs. to the acre; or sown in mixture with Alfalfa 3 lbs. Alsike and 12 lbs. Alfalfa to the acre. This will also inoculate the land, in case it should be desired to sow the land to a pure Alfalfa crop afterwards.

"Alsike Green When the Snow Is Off."

The clover seeds I received from you last year did extra well, but I think the Alsike Clover is the kind for this country. It stands both the drought and freezing better than the Red Clover. My clover is very green when the snow is off.—J. W. GIBSON, Braxton Co., West Va., Feb. 5th, 1918.

Alfalfa Seed.

Alfalfa has not advanced in price with the other clovers, and is being offered at about the same price as that of last year. Our Alfalfa is of exceptionally high-grade quality this year, and we strongly recommend its use to a large extent wherever practicable for hay crop.

Alfalfa is being much more generally sown in the spring than heretofore. The experience of farmers in this section for the past two or three years has been that Alfalfa gives splendid results sown on the wheat crop in the spring, the end of February or during March.

In some sections Alfalfa is sown in the spring with a nurse crop, such as Oats and Barley, but is likely to give better results sown on the top of fall-sown wheat, oats or other grain crops. It is, of course desirable to run a harrow over the field at the time of seeding, and this harrowing really benefits the grain crops rather than injuring them, as its acts as a cultivation for the crop.

"Three to Five Cuttings a Summer."

It may be of interest to you to know that we sowed a lot of Alfalfa which we purchased from you last spring—sowing it on April 7th last; cutting three crops last summer. It has become a showplace, many of the best farmers stating positively that it is the best field of Alfalfa in Buckingham County. We expect to cut it five times this summer. We believe much of our success in this was due to the excellence of the seed which you shipped us.—THE NEW CANTON MILLS CO., Buckingham Co., Va., April 2, 1918.

Grass Seed.

Orchard Grass is one of the best and most reliable grasses for the Middle and Southern States, either for hay or pasture. It succeeds well on nearly all soils, but does best on upland or moderately stiff soils. It makes excellent hay and gives the very best results mixed with Tall Meadow Oat Grass and Red Clover. Sow alone at the rate of two bushels per acre. Sown with Tall Meadow Oat Grass and Red Clover, the quantities usually sown are one bushel of Orchard Grass; one bushel of Tall Meadow Oat Grass and from six to eight lbs. of Red Clover.

Tall Meadow Oat Grass is one of the best of hay and pasture grasses for our Southland; considered better than Orchard Grass for light and medium soils; also makes an excellent combination with Orchard Grass and Red Clover for hay and pasture.

"Makes Crop When Other Grasses Fall."

The Tall Meadow Oat Grass I bought from you has given me entire satisfaction and I think it is one of the finest grasses grown for hay. It will make a crop when others fall. I have grown it for a good many years.—CHAS. A. HAY, Charlotte Co., Va., Sept. 1918.

HERDS GRASS or RED TOP continues in popularity everywhere throughout the Middle Atlantic and Southern States. It is one of the best and surest cropping grasses grown, and is indigenous to the soil over large areas through the South. It does better on a larger variety of soils than almost any other grass, succeeding well both on light and heavy soils and is adapted both for uplands and lowlands. It makes one of the best of grazing grasses, and increases and thickens out each successive year, lasting for years after it has been once seeded.

Seed Potatoes.

Our **Seed Potatoes** are all specially grown for seed purposes, in the best potato districts in this country, and are much superior to stocks ordinarily sold. Nearly all the Northern-grown varieties of potatoes that we offer are grown in the State of Maine, and are grown specially for seed purposes, and are superior to stocks ordinarily sold.

Our **Second Crop Seed Potatoes** are grown on the Eastern Shore of Virginia, from Maine-grown seed and we specially recommend these to our customers, as they give the very best results wherever planted; Second Crop Potatoes, being a little smaller in size than the Maine-grown, plant farther than the Maine-grown seed. They are very popular all through our trucking districts, and as they can be sold this year at a little less price than the Maine-grown seed, their planting is specially desirable.

"Cannot Praise Second Crop Cobblers Too Much."

Your Second Crop Irish Cobbler Potatoes did fine for me. I raised more from them than any other potatoes. I planted one bushel to themselves and made 35 bushels. I have recommended them to the neighbors. I can't praise them too much.—JAS. L. HAMMER, Alexandria Co., Nov. 1917.

Seed Oats.

The oats we offer are much better quality than the usual run of oats, being thoroughly re-cleaned and tested as to their reliability before sending out to our customers.

The **Burt or Ninety-Day Oats** which we offer still continues the most popular oats for spring seeding, and while it might be desirable, where oats can be put in before the middle of February, to sow the Rust-Proof, Fulghum or Winter Oats, still for later seedings we do not think there is a better or surer cropping oat in our list than the Burt or Ninety-Day.

CANADA FIELD PEAS should be put in as early as practicable. They are entirely hardy, and can be sown to excellent advantage with springs oats. They make a large yield and most nutritious crop of feed for horses and all kinds of cattle. Sow at the rate of one bushel to the acre, with one-and-a-half bushels of Rust-Proof or Appler Oats.

Dwarf Essex Rape.

Dwarf Essex Rape makes one of the quickest-growing of early green foods, and is particularly desirable for sheep, hogs, cattle and poultry. Can be sown to advantage during February or March. It should be sown at the rate of three to five lbs. to the acre in drills, or six to eight lbs. to the acre broadcast.

In addition to furnishing good grazing, rape is also good to cut and feed green, and also makes a good soil-improving crop for turning under. The young rape also makes a desirable salad, and is quite often sold like turnip salad in our markets.

Wood's Spring Grain Pasture Mixture.

A mixture composed in the proper proportions of Spring Barley, Rye, Oats and Rape, which makes a quick, early and nutritious pasturage. Where our customers desire a quick grazing pasture, we very strongly recommend this mixture, being about two or three weeks earlier than grass and clover.

This Spring Pasturage Mixture is also better adapted for sowing over a wider area than the regular grasses and clovers, as it will give excellent results even on light soils in some southerly sections where grasses and clovers cannot be grown to advantage.

SEASONABLE GARDEN SEEDS.

We carry at all times high-grade garden seeds for both home and market gardens, and believe our prices are as reasonable as high-grade tested seeds can be sold.

PEAS.

For a succession of Garden Peas we recommend the following varieties:

WOOD'S PEDIGREE EXTRA EARLY is by far the best for early planting, and is remarkably prolific. The pods are all well-filled and usually contain 6 to 8 beautiful green peas. These should be planted as soon as the ground can be worked.

THOMAS LAXTON—A very early wrinkled variety; pods containing from 7 to 8 large, rich flavored, dark green peas. The wrinkled varieties are not as hardy as the smooth and should not be planted until after the ground becomes warmer, as wrinkled varieties absorb a great deal of moisture and will rot if the ground is wet and cold.

BLISS EVERBEARING in our opinion is one of the best second-early wrinkled varieties. Claimed to be the largest-yielding, second early pea in cultivation.

CHAMPION OF ENGLAND.—One of the best late peas grown. Makes a vigorous growth; large pods containing very large and tender peas. Especially recommended for late planting in the home garden.

Hot-Beds and Cold Frames.

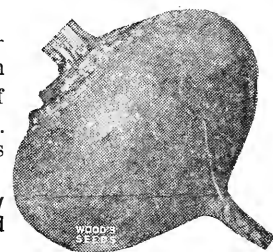

We want to impress upon our customers a more general use of Cold Frames and Hot-Beds, both for home and market gardens. A good many vegetables can be started to advantage in this way. **Beets, Cabbage Tomatoes, Egg Plants, Pepper, Lettuce, Cauliflower, Onions, Herbs** and a large variety of **Flower Seeds**.

If interested in the construction of Hot-Beds and Cold Frames write us and we will gladly send you directions for making frames and preparing soil, etc.

Beets.

To secure one of the earliest vegetables, you should sow beet seed in hot-beds and transplant cutting off the outer leaves when setting out. This should be done just as soon as the spring weather opens.

Extra Early Eclipse and Extra Early Egyptian are the best for forcing and for early outdoor planting.

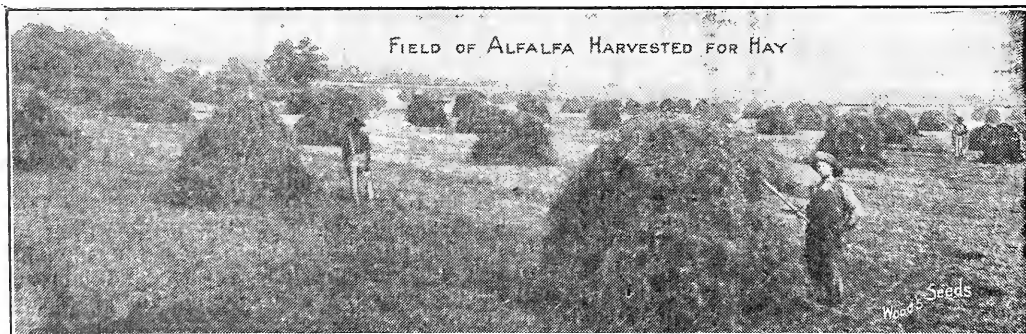

Onions.

To grow large Onions from seed they should be sown in hot-beds this month and when about the size of a goose quill, the plants should then be drawn and the tops cut off to about 6 inches from the bulb and then transplanted 4 to 5 inches apart in 12 to 18 inch rows. Transplanting always increases the yield. Prize Taker, Copper King and Mammoth Silver King in our opinion the best for transplanting. They all make large, fine flavored onions.

Large Hay Crop From Alfalfa.

I sowed 1 1/2 acres in Alfalfa 3 years ago from seed bought of you and am well pleased with it. Cut four times last year and have cut three this year, and my last cutting was the best yet and will get 1 or 2 crops yet.—J. F. ST. JOHN, Greene Co., Tenn.

The Alfalfa seed we purchased from you last spring was the best we ever bought. I sowed the seed in April and cut it three times this year.—J. R. NUCKOLS, Lee Co., Miss.

Wood's Special Grass and Clover Mixtures.

Wood's Special Grass and Clover Mixtures are put up from grasses in such proportions as experience has shown are best suited to the different soils and purposes for which they are recommended. Those for permanent pasturage are composed of grasses which succeed each other in growth and will give a succession from the first of spring till late in the winter; while for those desired more for cutting hay we have combined grasses which ripen together.

MIXTURES Nos. 1 to 5.

Specially prepared for permanent pasturage, but will also make large-yielding hay crops.

No. 1. For light, gravelly or sandy soils. Sow 30 to 35 lbs. to the acre.

No. 2. For good loam soil. Sow 30 to 35 lbs. to the acre.

No. 3. For heavy loam or clay soils. Sow 30 to 35 lbs. to the acre.

No. 4. For moist bottom land. Sow 25 to 30 lbs. to the acre.

No. 5. For wet bottom land. Sow 25 to 30 lbs. to the acre.

Price of all the above mixtures: 28c. per lb.; 10-lb. lots and over, 25c. per lb.; 100-lb. lots and over, 24c. per lb.

MIXTURES Nos. 6 to 9.

For Mowing for Hay, But Will Also Make Splendid Pasturage.

No. 6. For light, gravelly or sandy soils. Sow 30 to 35 lbs. to the acre.

No. 7. For good loam soil. Sow 30 to 35 lbs. to the acre.

No. 8. For heavy loam or clay soil. Sow 30 lbs. to the acre.

No. 9. For moist bottom land. Sow 20 to 25 lbs. to the acre.

Price of these mixtures: 28c. per lb.; 10-lb. lots and over, 25c. per lb.; 100-lb. lots and over, 24c. per lb.

PARK MEADOW MIXTURE. We would recommend that it be sown at the rate of about 40 lbs. to the acre. Per lb. 30c.; 10-lb. lots and over, 26c. per lb.; 100-lb. lots, 25c. per lb.

WOOD'S LAWN GRASS SEED.

WOOD'S EVERGREEN LAWN GRASS. The best for beautiful, green, velvety lawn—all the year around, where proper care and attention can be given. By express or freight, qt. 30c.; 10-lbs. and over, 28c. per lb.; 100-lbs. and over, 26c. per lb. By mail postpaid, qt. 35c.; 5 lbs. for \$1.75.

WOOD'S PERMANENT LAWN GRASS, especially prepared for parks or large places where lawn and grazing are to be combined. By express or freight, 30c. per lb.; 10-lbs. and over, 27c. per lb.; 100-lbs. and over, 25c. per lb. By mail postpaid, lb. 38c.; 5 lbs. for \$1.65.

WOOD'S LAWN ENRICHER. The best of fertilizers for lawns, either as a top-dressing or applied at time of seeding. 5-lb. bag, 50c.; 10-lb. bag, 75c.; 25-lb. bag, \$1.00; 100-lb. bag, \$3.50; ton, \$65.00. Half ton at ton rate.

The Importance of Poultry Raising.

The high price of eggs, and the high prices Poultry is bringing in our markets should cause poultry raisers everywhere to increase their capacity and consider the best and most economical methods of feeding for profitable results.

There should be just as much effort to raise Poultry everywhere as there is to raise food and vegetable crops. Small flocks of Poultry can be advantageously kept in wire enclosures in back yards and suburban places, with the best results. In fact, the best results from Poultry are usually obtained from flocks of twelve or fifteen.

The ordinary wastage from household use, such as outside cabbage and lettuce leaves, turnip tops, ground or crushed bones, and nearly all left-over scraps, make excellent poultry food, and feeding to poultry provides one of the best means of using up these waste products. These, in addition to the special poultry foods which we supply, will enable families to raise their own poultry and have a supply of eggs for their own use at a very little cost. Every effort should be made to increase poultry production, not only in small city or suburban lots, but by poultry raisers and farmers everywhere, as it is one of the best and most efficient methods of increasing our food production, and, at the same time, one of the most profitable enterprises that can be undertaken at the present time.

WOOD'S POULTRY FOODS are specially prepared from years of experience, for the different purposes for which they are recommended.

POULTRY SUPPLIES. Every one who raises poultry should consult the Poultry Supply pages of our Annual Catalog. They will find many useful and valuable hints as to what to feed or give to poultry for the best and most profitable results.

T.W. Wood & Sons, Richmond, Va., Price-List of Field Seeds

When Sending Orders at Prices Named Here, Please Mention Crop Special No. 1086.
February 7th, 1919.

Prices of Field Seeds are always subject to market fluctuations. We always fill all orders entrusted to us at lowest ruling prices on date order is received. If prices decline, we give our customers the benefit of it. If they advance, we charge the advance prices. In case customers desire to limit us to filling orders at prices quoted on any particular date they will kindly so state on order, or mention date and number of "Wood's Crop Special," upon which the order is sent.

Terms on all Field Seeds, net cash. Customers who have no regular accounts with us will kindly remit the amount with their order or name business reference as customary before opening new accounts.

The prices of Field Seeds in our Catalog were those in effect when it went to press. They are always subject to market changes, and the prices named in this list take the place of those in the Catalog.
